

CONTENTS

Simulation, modelling and dielectrical properties

Dibet – emc laboratory: activity in the electromagnetic material processing	9
Antenna and Microwave Laboratory	29

Medical and biomedical applications

Biological effects and biomedical applications of electromagnetic fields	37
Exposure to electromagnetic fields: biological effects and materials treatment	45

Applications in analytical and synthetic chemistry

Microwaves and ecofriendly procedures in the cosmetic and pharmaceutical scientific research	51
Use of microwaves to synthesize solid acid catalysts: about an hidden effect?	61
GERM - groupe d'études et de recherche sur les microondes	65
Institut de recherches sur la catalyse et l'environnement de Lyon «IRCELYON»	75
Microwave applications in the synthesis of nanostructured materials and in organic extractions	81
CMIC – POLIMI SCT Laboratory: activity in the MW assisted synthesis of compounds	89
Better control and process intensification by in situ microwave heating	105

Materials Processing

Lab for microwave processing of polymers and composites	113
Microwave application group (MAG)	119
Naxagoras technology sas	135
ENEA microwave laboratory	141

Applicators and control devices

Alter power systems	145
Sairem, microwave & radio frequency	149
EMitech	153
